

### **cell and molecular biology pdf**

Cell biology (also called cytology, from the Greek  $\kappa\upsilon\tau\omicron\varsigma$ ,  $\kappa\upsilon\tau\omicron\varsigma$ , kytos, "vessel") is a branch of biology that studies the structure and function of the cell, which is the basic unit of life. Cell biology is concerned with the physiological properties, metabolic processes, signaling pathways, life cycle, chemical composition and interactions of the cell with their environment.

The definitive text in cell biology. As the amount of information in biology expands dramatically, it becomes increasingly important for textbooks to distill this vast amount of scientific knowledge into concise principles and enduring concepts.

Host cell factor 1 (HCF-1), encoded by the ubiquitously expressed X-linked gene Hcfc1, is an epigenetic coregulator important for mouse development and cell proliferation, including during liver regeneration. We used a hepatocyte-specific inducible Hcfc1 knockout allele (called Hcfc1 hepKO) to induce HCF-1 loss in hepatocytes of hemizygous Hcfc1 hepKO/Y males by 4 days.

Guo et al. report the cell fate continuum during induced pluripotent stem cell (iPSC) reprogramming at single-cell resolution. By developing SOT as a new analytic tool, they identify several previously unknown bifurcation points along the reprogramming path and propose a generic bifurcation model for cell fate decisions.

### **New Articles: Molecular Cell**

The cell (from Latin cella, meaning "small room") is the basic structural, functional, and biological unit of all known living organisms. A cell is the smallest unit of life. Cells are often called the "building blocks of life". The study of cells is called cell biology. Cells consist of cytoplasm enclosed within a membrane, which contains many biomolecules such as proteins and nucleic acids.
