conducting and the inductor current will decrease. Figure 1.3 shows the waveforms of the control signal and the inductor current. The converter is usually designed so that the magnitude of the ripple in the output voltage becomes small. If the ripple is insignificant, the inductor current increases and decreases linearly as shown in Figure 1.3.

The buck step-down converter is used as the typical example, but the concepts can be applied ... is connected to a current source, which is the inductor in the buck converter.
