A Java applet was a small application that is written in the Java programming language, or another programming language that compiles to Java bytecode, and delivered to users in the form of Java bytecode. The user launched the Java applet from a web page, and the applet was then executed within a Java virtual machine (JVM) in a process separate from the web browser itself.

The problem is that using PDDocument.save() creates a new document and thus invalidates the signature. Using PDDocument.saveIncremental(...) does not invalidate the signature, however it will not update any changes to the document (such as annotations or form filling), it is only used to save a signature.
