

high frequency and automated pdf

In financial markets, high-frequency trading (HFT) is a type of algorithmic trading characterized by high speeds, high turnover rates, and high order-to-trade ratios that leverages high-frequency financial data and electronic trading tools. While there is no single definition of HFT, among its key attributes are highly sophisticated algorithms, co-location, and very short-term investment horizons.

High-frequency trading - Wikipedia

Algorithmic trading is a method of executing a large order (too large to fill all at once) using automated pre-programmed trading instructions accounting for variables such as time, price, and volume to send small slices of the order (child orders) out to the market over time. They were developed so that traders do not need to constantly watch a stock and repeatedly send those slices out manually.

Introduction Cardiac arrest in the pediatric population is an unfortunate and devastating occurrence. It is estimated that 16,000 American children suffer a cardiac arrest each year.¹ Tragically, only 5% to 10% of patients survive out of hospital arrests and often with severe neurological sequelae.² Survival statistics for
