ABSTRACT. This work presents an experimental study of purification of a biogas by removal of its hydrogen sulphide ( $H_2S$ ) content. The  $H_2S$  was removed by means of chemical absorption in an iron-chelated solution catalyzed by Fe/EDTA, which converts  $H_2S$  into elemental sulphur (S). Preparation of the catalyst solution and the results of biogas component absorption in the catalyst solution ...

The objective of this work is to investigate the production of hydrogen as an energy source by means of the reaction of aluminum with water. This reaction only occurs in the presence of NaOH and KOH, which behave as catalysts. The main advantages of using aluminum for indirect energy storage are ...

Leaching and recovery processes for zinc and copper from brass slag by sulfuric acid were carried out and iron and aluminum were also precipitated as hydroxides in addition to silica gel.

Introduction. Circulating fluidized bed is a relatively new technology with the ability to achieve lower emission of pollutants. Extensive research has been conducted on this technology for the past 10 years because pollution in the world is getting more serious by the day and clean practice will be very crucial for the sustainability of the earth.

Reattori per reazioni con catalizzatore eterogeneo. Nel caso in cui la reazione all'interno del reattore si svolga tramite l'uso di un catalizzatore eterogeneo, bisogna predisporre uno spazio (chiamato "letto") all'interno del reattore in cui fissare o fare muovere il catalizzatore (solido).

For material flowing through a volume, the residence time is a measure of how much time the matter spends in it. Examples include fluids in a chemical reactor, specific elements in a geochemical reservoir, water in a catchment, bacteria in a culture vessel and drugs in human body. A molecule or small parcel of fluid has a single residence time, but more complex systems have a residence time ...

Em um RPA, um ou mais fluidos reagentes sÃ£o introduzidos em um reator tanque com um agitador enquanto o efluente do reator Ã© removido. O agitador agita os reagentes para garantir a mistura adequada.
